Notes: OLS regressions of log recovery on treatment assignment, with group fixed effects (Y2). The unit of observation is a circle, as defined at the time of randomization. In Columns 1 and 2, the model-predicted effort is the Nash equilibrium level of effort under $\alpha + 2se.$. In Columns 3 and 4, effort corresponds to the equilibrium effort under $\alpha - 2se.$. Columns 2 and 4 include tax base and recovery rate at baseline and their interactions with treatment assignment in the specification. Robust standard errors in parentheses. Standard errors are clustered by circle.
